engineering.

Undergraduates

studying civil and

coastal engineering, as

well as analysis and

differential equations,

are started off applying

calculus to the

treatment of nonlinear

partial differential

equations, before given

the chance to practice

real-life problems

related to the fields.

Hydraulic engineering
as a sub-discipline of
civil engineering is
concerned with the
flow and conveyance of
fluids, principally water
and sewage. One
feature of these
systems is the
extensive use of
gravity as the motive
force to cause the
movement of the

Pressure = Force/ Area.

So, hydraulic pressure can be stated as the force exerted by a fluid on unit area, anywhere on the surface within the container.
