show that the points of the arithmetic sequence lie in a straight line.

Arithmetic sequences | Sequences and series | Siyavula

This sequence has a difference of 5 between each number. The values of a and d are: $a = 3$ (the first term) $d = 5$ (the "common difference")

Using the Arithmetic

Arithmetic

Sequences And

$$\begin{aligned} \text{Sequence rule: } x_n &= a + d(n-1) = 3 + 5(n-1) \\ &= 3 + 5n - 5 = 5n - 2. \end{aligned}$$

So the 9th term is: $x_9 = 5 \times 9 - 2 = 43$. Is that right? Check for yourself!

numbers with a definite pattern. If you take any number in the sequence then subtract it by the previous one, and the result is always the same or constant then it is an arithmetic sequence. The constant difference in all pairs of consecutive or successive numbers in a sequence is called the common difference, denoted by the letter d . We use the common difference to
