These forces, which include gravity, muscle activity, and ground reaction forces (i.e., the result of foot and ground interaction during locomotion) are resisted in the body by bone, muscle, and ligament, as well as other soft tissues.

6. Basic Biomechanics | Musculoskeletal Key

The musculoskeletal system has four primary soft tissues: skeletal muscles, tendons, ligaments and articular cartilages. Skeletal muscles are contractile, and their primary function is to shorten and produce force and so cause movements at joints. Muscle contraction occurs through cyclic interactions of myosin-based cross-bridges with actin.
