Bee Sting Allergy: Symptoms of Anaphylaxis

A bee sting is a wound caused by the stinger from a bee (honey bee, bumblebee, sweat bee, etc.) being injected into one's flesh. The stings of most of these species can be quite painful, and are therefore keenly avoided by many people. Bee stings differ from insect bites, and the venom or toxin of stinging insects is quite different.

Bee sting - Wikipedia

Bee venom is a complex substance, and laboratory research into its medical applications is relatively new. Although many people swear by at-home bee therapy, known as apitherapy to treat their MS and other conditions, science moves a bit more cautiously. Bee venom is a toxin, so a scientific approach to research and treatment must be taken.

Bee Venom and the Chemistry of OUCH! | Bee Culture

The idea or premise behind bee venom is this. If you apply bee venom to your skin every day, you're getting something similar to being stung by bees albeit, ever so gently. Unlike the painful memories of childhood being lightly stung by Beetox, feels nothing like a bee sting.
