### Grinding Mills Flsmidth

All FlSmidth horisontal grinding mills undergo an extensive design review process, including structural finite element analysis, main bearing fluid film analysis, steady state torsional analysis and system stiffness/dynamic modal analysis for gearless grinding mills.

### Horizontal mills for your mining operations - FlSmidth

With years of experience in the cement and mining industries and over 3000 mills sold worldwide, FlSmidth continues to develop its range of efficient milling and grinding solutions.

### Flexible milling and grinding solutions that last | FlSmidth

Stirred mills & Tower mills — simple, effective and cost efficient As lower ore grades and complex mineralogy are driving demand for more efficient fine grinding, you can depend on FlSmidth for a full range of fine-grinding mills designed for easy shipment, simple erection and trouble-free maintenance.

For fast track delivery schedules, we offer a standardised series of mills known as the FT Series Grinding Mills. These FT Mills are designed in standard sizes from 1.6 to 4.3 meters in diameter. These designs enable quick turn-around for approval documents, improve equipment delivery, and increase parts availability.

Rely on our proven track record of SAG and AG Mill superiority. Since the early 1980s, we have been designing and manufacturing Semi-Autogenous (SAG) and Autogenous (AG) Grinding Mills under the Fuller-Traylor brand. Semi-autogenous grinding uses a minimal ball charge in the range of 6-15% while autogenous grinding uses ore only.

Grinding, primarily by attrition, Rod Mills require comparatively low levels of power to operate. Rod Mills can be either wet or dry designs. Once replaced by AG and SAG mills, Rod Mills have had a recent resurgence in the industry.

### Rod Mills for coarse grinding | FlSmidth

The mills are typically driven by our FlSmidth MAAG LGDX side drive - gearing rated to the latest proven AGMA standards. The mill drive is provided with an auxiliary drive for slow turning of the mill.

For raw materials and cement clinker, the vertical roller mill is an excellent grinding solution because of the relatively lower cost of installation, ease of operation and maintenance, energy efficiency and product quality. Further, our vertical roller mill solution for cement grinding has an ability to dry, grind and separate within a single unit.
