Login - Reactive Training Systems

Reactive training is defined as quick, powerful movements involving an eccentric contraction (force reduction) followed immediately by an explosive concentric contraction (force production). An example would be sitting down into a squat to load the muscles, and then explosively jumping up, as if trying to touch the ceiling.

What is Reactive Training and Why Should I Do It?

Traditional powerlifting programming is flawed. Luckily, Mike Tuchscherer's Reactive Training Systems offers a solution. Generally speaking, traditional powerlifting programs call for prescribed sets, reps, and weights. Often times, several months' worth of training is written in advance. Assuming the conditions are the same as when the program was written, and the lifter progresses at a predictable rate, this actually doesn't present a problem at all.

Analysis of Reactive Training Systems - Complementary Training

Fatigue Percents Revisited By Mike Tuchscherer. In the RTS Manual, I introduced Fatigue Percents as a reliable, effective way to autoregulate volume based on stress. In the Seminar DVD, I discussed them in more detail and outlined several more dynamic examples on how to use them. Today, I want to outline some different ways that you can use fatigue percents to effectively control your training ...
